

TriGeo Network Security Ranks #1 in *Bank Technology News* FutureNow List

Mid-Market SIEM Solution Places Company at Top of “10 Companies That Set Themselves Apart” for Security Innovations

POST FALLS, Idaho (April 7, 2008) — *Bank Technology News* ranked TriGeo Network Security as the #1 innovator in The FutureNow List, highlighting the growing need for mid-market financial services organizations to proactively protect networks from internal and external threats in real time, while achieving compliance. The company earned top honors in the annual security innovation ranking.

The FutureNow List recognizes “10 companies that set themselves apart with the security innovations they brought to market in the past year...and the contribution these products will make to improving security within financial services organizations.” TriGeo was the only security information and event management (SIEM) company to make the list, driven by its new InSight solution, “the first business intelligence product for network management and security.”

Priced starting at \$9,000 and an add-on to TriGeo’s Security Information Manager (SIM), InSight “allows users to go deeper into network log data with each click of the mouse, which allows them to uncover and zero in on a single suspicious activity among millions with a few clicks – instead of wading through pages and pages of a report.”

According to the magazine, “Innovations by TriGeo, ranked No. 1, give small and mid-sized banks a fighting chance to catch insiders who might be stealing customer data or intellectual property.” TriGeo is the only SIEM provider exclusively targeting mid-market companies with networks supporting 50 to 5,000 devices, automatically identifying, notifying and responding to network attacks, suspicious behavior and policy violations – including unauthorized USB device use – as they happen.

TriGeo’s appliance-based system performs log management and analysis for all machine, user and network activity and comes stocked with hundreds of pre-built rules and reports for data and network protection. Users can easily customize and create new rules on the fly and enable proactive responses such as quarantining, blocking, routing and controlling services, processes, accounts and privileges.

“This top ranking reinforces that SIEM is the go-to technology to analyze and correlate network actions to implement security policies and achieve compliance without spending big bucks,” said Michelle Dickman, president of TriGeo Network Security. “We’ll continue to provide the mid-market with the best solutions designed and priced for their networks. We’re honored to receive this recognition from *Bank Technology News*.”

About TriGeo Network Security

TriGeo Network Security delivers enterprise security information and event management (SIEM) designed specifically for the needs of the mid-market. TriGeo SIM is the only real-time SIEM appliance that automatically identifies and responds to network attacks, suspicious behavior and policy violations. This award-winning product combines real-time log management, event correlation, USB detection and prevention with powerful active response technology. TriGeo SIM is both a unique network defense technology and an "Audit-Proven" compliance solution that meets the security monitoring and log management requirements imposed by PCI, GLBA, NCUA, FDIC, HIPAA, SOX and more.

TriGeo has hundreds of customers across key vertical markets including financial services, health care, government, utility, retail and media/entertainment. TriGeo SIM has won numerous awards including the 2007 SC Magazine Reader Trust Award, 2007 Frost & Sullivan North American Technology Innovation of the Year Award, and the SC Magazine Best Buy of 2006 award for Event Management. The Company is a member of the PCI Security Standards Council and PCI Security Vendor Alliance, and is represented by partners nationwide.
