SECURITY WINNER OF 2006 GLOBAL EXCELLENCE IN
SECURITY INFORMATION MANAGEMENT***

TriGeo SIM Gains High Trust of Customers in Surging SIM and Compliance Markets

POST FALLS, ID, June 13, 2006 – TriGeo Network Security, a leading provider of security information management (SIM) solutions, today announced that *Info Security Products Guide*, a Silicon Valley Communications publication and the world's leading publication on security-related products and technologies, has named TriGeo's SIM solution as the winner of the 2006 Global Excellence in Security Information Management award.

A SIM solution provides reporting and analysis, and is used to support IT security, audit and compliance functions. In addition to real-time analysis assisting security incident response, SIM solutions are used by IT security personnel who must respond to and take action over internal and external threats.

More than 18,000 end users and prospective customers worldwide participated in the voting and the award marks the third significant industry honor that the TriGeo SIM solution has received in the last year.

"TriGeo's SIM represents a visionary product in the fast-growing security information management and security event management markets," said Rake Narang, editor-in-chief, *Info Security Products Guide*. "The TriGeo SIM is particularly well-suited for mid-market companies seeking to comply with new regulatory requirements and get a better handle on how their network resources are being used and secured."

"We are pleased to have been recognized by the readers of *Info Security Product Guide* and the award for 'Excellence in Security Information Management Solution' means our product is clearly the SIM solution of choice, particularly for those customers in the mid-market," said Michelle Dickman, President, TriGeo Network Security. "We're also very pleased that our automated-response capabilities played a role in differentiating our SIM solution from the competition. We believe this functionality is important for organizations with smaller IT staffs with limited time and resources."

Voters felt that TriGeo's SIM solution provides a cost-effective and easily deployed SIM appliance. Mid-size business customers use TriGeo for automated-response capabilities and its ability to actively defend the network through highly targeted correlation rules, behavior analysis and integration with network infrastructure. TriGeo's ability to quarantine, block, route and control services, processes, accounts and privileges are among its SIM solution's strengths and differentiators. A pioneer in automated remediation and active response technology, this Product Excellence Award solidifies TriGeo's leadership in SIM technology.

An electronic copy of the Product Excellence Guide is available via email. Registration is required by *Info Security Products Guide* at <http://www.infosecurityproductsguide.com/freeguide.html>

About TriGeo Network Security

Formed in 2001 as the pioneer and leader of Automated Remediation through Intelligent Correlation™, TriGeo protects the entire network – from perimeter to endpoint. With more than 40,000 nodes deployed, TriGeo Network Security is the leading provider of information and event management technology for mid-market enterprises.

The TriGeo Security Information Manager is the only network security appliance that automatically identifies, notifies and responds to network attacks, suspicious behavior and policy violations. With patent-pending technology for real-time log analysis, event correlation, automatic alerts and policy-based active response, TriGeo provides an innovative network defense technology through a complete security information management (SIM) solution.

TriGeo is privately held with headquarters in Post Falls, Idaho. For more information, visit the company's website at www.trigeo.com or call (208) 664-7000.

About Silicon Valley Communications Awards

Info Security Products Guide, published by Silicon Valley Communications, plays a vital role in keeping end-users informed of the choices they can make when it comes to protecting their digital resources. It is written expressly for those who are adamant on staying informed of security threats and the preventative measures they can take. Readers will discover a wealth of information in this guide including tomorrow's technology today, best deployment scenarios, people and technologies shaping info security and independent product evaluations that facilitate in making the most pertinent security decisions for any organization. The *Info Security Products Guide Awards* recognize and honor excellence in all areas of information security. To learn more, go to www.infosecurityproductsguide.com and stay secured.
