

**TRIGEO ANNOUNCES THE ONLY SIM PRODUCT WITH AUTOMATED REMEDIATION  
THROUGH INTELLIGENT CORRELATION™**

*Integrating with existing network security products and operating systems, TriGeo SIM V 3.0 provides real-time log analysis, attack remediation, and policy enforcement.*

**SAN FRANCISCO – RSA CONFERENCE** – (February 14, 2005) – TriGeo Network Security ([www.trigeo.com](http://www.trigeo.com)), the pioneer and leader of Automated Remediation through Intelligent Correlation™, today announced a powerful new version of TriGeo Security Information Manager (TriGeo SIM), offering the industry's first product for the small to medium enterprises (SMEs) that automatically identifies, notifies and responds to suspicious behavior, policy violations, and network attacks. Unlike traditional, passive security information management products, TriGeo actively defends the network.

TriGeo SIM squarely addresses SMEs remediation requirements by monitoring firewalls, intrusion detection systems, intrusion prevention systems, routers, switches, VPNs, servers, anti-virus software, and workstation activity. Once an event is identified, TriGeo instantly notifies and transmits security alert information to e-mail, cell phones, pagers, and handheld devices for events that merit alert status. By blocking an IP address, routing traffic or quarantining a workstation from the rest of the network, TriGeo responds in real-time to threats using user-defined policies.

TriGeo SIM V 3.0 includes four robust features:

- An intuitive graphical interface for the construction of complex cross-event correlations that combine events, thresholds, assets and custom lists.
- Over 500 pre-defined rules that can be enabled out of the box or used as templates to create custom rules.
- An extensive list of active responses.
- Environmental awareness to provide targeted real-time threat analysis, attack remediation, and policy enforcement.

“Security Information Management solutions will play a major role in 2005 to actively defend networks and meet the increasing demands of auditors and regulators,” said Michelle Dickman,

CEO of TriGeo Network Security, “These products automate the complex task of network device log aggregation and real-time analysis.”

Dickman said, “If you’re going to empower a system to automatically defend your network, real-time analysis and intelligent correlation are two critical factors. It is extremely difficult to analyze the tremendous volume of data, and impossible to analyze and correlate it in real-time, without automation. With its patent-pending technology, real-time log analysis, automatic alerts, and policy-based automated remediation mechanism, TriGeo provides a viable network defense solution.”

A combination of factors will drive the acceptance and reliance upon SIM technology. IT staffs continue to face budget cuts while dealing with increased responsibility and growing complexity. The introduction of additional point solutions, such as deep packet inspection firewalls, intrusion detection and intrusion prevention, only compounds the problem. Fortunately, powerful and affordable solutions are now available. A few of these products, such as TriGeo, provide powerful event correlation, notification and automated remediation through intelligent correlation. TriGeo combines all of the above with a bundled intrusion detection system, and utilizes an appliance model for rapid deployment and configuration.

### **Pricing Details**

Pricing for TriGeo SIM starts at \$80 per seat. Volume licensing and eligible non-profit discounts are available.

### **About TriGeo Network Security**

Formed in 2001 as the pioneer and leader of Automated Remediation through Intelligent Correlation™ for securing small and medium-sized enterprise networks, TriGeo protects your entire network environment--from perimeter to endpoint—with a comprehensive, integrated solution. TriGeo is the leading real-time security information management appliance that automatically identifies, notifies and responds to suspicious behavior, policy violations, and network attacks.

TriGeo is a privately held company headquartered in Post Falls, Idaho. For more information, visit the company’s website at [www.trigeo.com](http://www.trigeo.com) or call (208) 664-7000.
