**NEWS RELEASE**

**Websense® Announces TriGeo Support for Websense Web Security Suite version 6.2**

*Best-of-breed web filtering and web security software  
seamlessly integrated into TriGeo's Security Information Management solution*

SAN DIEGO, June 19, 2006—Websense, Inc. (NASDAQ: WBSN), a global leader in web security and web filtering productivity software, and TriGeo Network Security, a leading provider of comprehensive security information management (SIM) solutions for the mid-market, today announced the integration of Websense® Web Security Suite™ v6.2 web filtering and web security software with TriGeo's SIM solution.

Using Websense Web Security Suite with TriGeo SIM, organizations can access enterprise-wide security information, including employee web-surfing patterns, in a single, centralized console, enabling a quick and automated response when exposed to security threats such as from a hacking intrusion, viruses, spyware and keylogging software.

The integration provides customers with automated processes to report on threats detected and blocked by Websense software. For example, if Websense detects malicious communications coming from an endpoint, Websense will automatically alert TriGeo SIM which will correlate that information with other network notifications and alert the administrator of the security risk. The security capability and efficiency of the joint solution provides organizations with a greater overall return on investment by mitigating threats and automating response processes.

Recently released Websense Web Security Suite v6.2 uses the same award-winning, easy-to-use web security functionality as previous versions with added features that further position the software as an innovative web and endpoint security solution. Websense Web Security Suite v6.2 provides automatic protection from drive-by spyware and signature-based protection from malicious traffic on corporate networks. The Security Suite also allows proactive control over malicious network traffic and management of employee access to web-based threats. Websense is the first company in the web security market to actively seek out and block bot websites, the protocols they employ, and the launch of bots at the desktop.

The TriGeo SIM has the unique ability to actively defend the network through highly targeted correlation rules, behavior analysis and integration with network infrastructure. The defensive arsenal includes the ability to quarantine, block, route and control services, processes, accounts and privileges.

“TriGeo is one of the top real-time security information management appliances and the only one that's designed to automatically identify, notify and respond to network attacks, suspicious behavior and policy violations,” said Michelle Dickman, President, TriGeo Network Security. “By aligning TriGeo with Websense software, our mutual customers gain enterprise-wide network visibility, leading edge web security, and proactive network defense”

Websense Web Security Suite v6.2 delivers comprehensive protection by blocking access to websites hosting bot command-and-control centers, eliminating non-HTTP bot network traffic, and blocking the launch and spread of bots and bot networks. Additional key security features of Websense Web Security Suite v6.2 include protection from email-borne worms, enhanced protection against drive-by spyware, management of Skype in enterprise networks, and the ability to manage non-Port 80 HTTP traffic. At the endpoint, Websense Client Policy Manager™ (CPM) and Websense Web Security Suite-Lockdown Edition™ integrate with Microsoft XP firewall and provide improved support for Cisco's Network Admissions Control.

“Websense web security software provides proactive protection against internet threats associated with bots and bot networks and by blocking access to websites that contain malicious code, spyware, and crimeware,” said Steve Kelley, Director of Strategic Alliances for Websense, Inc. “The integration of Websense software with TriGeo SIM takes an expansive array of web-based security threats and allows IT organizations to correlate events from Websense with TriGeo's enterprise-wide view of the network. This means IT organizations can immediately take action against a hacking intrusion or keylogging software as they occur.”

In addition to having the most effective mechanism for protecting organizations and employees from spyware, malware and crimeware by preventing access to infected and malicious websites, Websense v6.2 software functions as an easy-to-use, highly effective, proven alternative to Intrusion Detection and Intrusion Prevention (IDS/IPS) services. The software provides the advantages of IDS/IPS without the complexity or advanced IT skills required for deployment and maintenance. Furthermore, by controlling the use or launch of malicious, unwanted, and questionable applications, Websense Web

Security Suite-Lockdown Edition serves as an effective and low-risk alternative endpoint security solution to behavior-based Host Intrusion Prevention Solutions (HIPS).

TriGeo is a member of the Websense Web Security Ecosystem™ -- a comprehensive ecosystem of world-class security and networking technology providers to enable easy deployment and integration of Websense solutions in enterprise environments. The Websense Web Security Ecosystem incorporates vendors from leading security and networking markets, including: network access control, internet gateways, certified appliance platforms, security event management, and identity management. The Websense Web Security Ecosystem provides interoperability of joint solutions to ensure seamless integration in enterprise environments.

Websense v6.2 software is currently available for organizations who wish to protect themselves from internet and application security threats. For a free 30-day evaluation of Websense software or for more information on protecting your organization from a wide range of threats including spyware, virus outbreaks and internal hacking exploits, please visit [www.websense.com](http://www.websense.com). Websense Security Labs™ offers free email security updates as new internet threats are discovered and is available at [www.websensesecuritylabs.com](http://www.websensesecuritylabs.com).

TriGeo's award-winning SIM solution combines real-time log analysis, event correlation, USB detection and prevention with powerful active response technology. TriGeo SIM is both a unique network defense technology and an "Audit-Proven" compliance solution that meets the security monitoring and log management requirements imposed by PCI, GLBA, NCUA, FDIC, HIPAA, SOX and related compliance initiatives.

### **About Websense, Inc.**

Websense, Inc. (NASDAQ:WBSN), a global leader in web security and web filtering software, is trusted to protect 24 million employees worldwide. Websense proactively discovers and immediately protects customers against web-based threats such as spyware, phishing attacks, viruses and crimeware with maximum protection and minimal effort. With diverse partnerships and integrations, Websense enhances our customers' network and security environments. For more information, visit [www.websense.com](http://www.websense.com).

### **About TriGeo Network Security**

Formed in 2001 as the pioneer and leader of Automated Remediation through Intelligent Correlation™, TriGeo protects the entire network – from perimeter to endpoint. The TriGeo Security Information Manager is the only network security appliance that automatically identifies, notifies and responds to network attacks, suspicious behavior and policy violations. With patent-pending technology for real-time log analysis, event correlation, automatic alerts and policy-based active response, TriGeo provides an innovative network defense technology through a complete security information management (SIM) solution. TriGeo is privately-held with headquarters in Post Falls, Idaho. For more information, visit the company's website at [www.trigeo.com](http://www.trigeo.com) or call (208) 664-7000
